Reduce bandwidth cost and Accelerate Internet application.
20%~200% speeds up after SDWAN Optimization.

by using Packet Compression, Packet Correction, Packets Deduplication, Packet cache, Software Define WAN.

SD-WAN is a Software-Defined the virtual Wide-Area Network (virtual dedicated data line) from Broadband, Lease line, MPLS, 4G/5G.

OSIgate is providing the most simple SDWAN solutions with Acceleration :

» **Step 1 : just need TWO units of [OSIgate 6000i] SDWAN Acceleration Routers.**
» **Step 2 : pre-define a pair of internal IP on each [OSIgate 6000i] unit.**
» **Step 3 : Plug the device behind the firewall and allow SDWAN port.**
